EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Peter McKenna on 11/07/2005.

The application has been amended as follows:

Claim 7 (amended) A battery controller, comprising: a push switch operable to be switched on and off, a power switch, connected to the push switch, and operable to allow a leakage current to flow to a battery pack based on input from the push switch; the battery pack including a battery, means for detecting the leakage current, and means for turning off the battery when the leakage current is detected; and means for charging the battery pack.

Allowable Subject Matter

1. Claims 1-10 allowed.
2. The following is an examiner's statement of reasons for allowance:

For claims 1 and 7, primarily, the prior art of record does not disclose or suggest the claimed combination as filed for claim 1 and as amended as noted above for claim 7, and more fully explained below.

For claim 1, applicant argues that the push switch is not disclosed as previously submitted by the Examiner's earlier broader interpretation of the term. Applicant is

correct since now, the push switch is taken to not cover the examiner's earlier broader interpretation, which asserted that a mating connection was a push switch. Further, as applicant has argued, there is no suggestion or disclosure for the leakage current to flow based on input from the push switch as claimed in the combination since the input in Griffen goes to the controller and not directly to the power switch. Similar remarks apply to claim 7, where the term "power switch, connected to the push switch, and operable to allow a leakage current to flow to a battery pack based on input from the push switch" is interpreted to mean that the push switch directly inputs to the power switch (instead of via a controller) to allow the leakage current to flow.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel Berhanu whose telephone number is 571-272-8430. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Sherry can be reached on 571-272-2084. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
